SECTOR MAP - CANTOR

KNOWN SPACE

PETRA

The Cantor Holacracy has had limited contact with Petra, exclusively through the use of probes sent through the wormhole between systems. The probes have returned minimal data on Petra, showing it to be system rife with asteroids. However, there seems to be a terrestrial planet in a habitable zone between the system's most interior and exterior asteroid belts, and Cantor has sent and received deliberate signals to and from it.

UNKNOWN SPACE

Probes have detected other wormholes leading out of Petra far past its most exterior asteroid belt, but Cantor hasn't successfully sent a probe through any of them yet.
